Car & spare parts

Automotive Industry

The challenge

In a dynamic branch like the automotive industry, flexibility is essential. Extra deliveries of car and spare parts demand the ability to instantly adapt schedules and provide the extra capacity needed. Alternative transport modes are the key to solving operational challenges and contingency issues, while creative solutions are vital for tackling storage problems and minimizing waiting times.

Automotive Industry

One of Ewals most frequently deployed products, named **FullLoads@Ewals**, is a perfect fit for the Europe-wide supply of car and spare parts. Ewals uses a flexible combination of modalities to transport a fixed amount and a variable margin of loads daily for one of the largest producers of luxury automobiles.

Automotive Industry

To enable the combination of modalities, Ewals builds upon the **Mega Huckepack XLS** trailer, certified in line with the customer's strict security requirements. To tackle location-specific challenges, Ewals offers **Fast Freight**, unaccompanied transport and the **Warehouse On Wheels** concept.
